🎬 Cues — marking the best moments

Pool Master Counter · by voice, key or button · October 25, 2026

Before you start

1. Open the scoreboard at `http://localhost:4173` on the Mac (or `http://10.0.0.52:4173` from another device on the Wi-Fi). **Not** the GitHub web page: recording needs the Mac's server.
2. Click 🎬 **Record** in the scoreboard's header. The recording page opens in the **same browser** — both must come from the same address, or they can't talk to each other.
3. Press ● **Record** on the recording page. That click also lets the page silence its sound at each cue (see "The sound" below).
4. Back on the scoreboard, the ⭐ **Cue** button appears in the score section: you're ready.

Three ways to make a cue

🎤 By voice

Hold 🎤 **Talk** (or the **.** key on the number pad), say **"Mark"**, let go. Later: hold, say **"Finish"**.

⌨ The / key

Press **/** (number pad or keyboard) to start a cue; press it again to end it. While nothing records, **/** pauses the shot counter as before.

👆 The button

Tap ⭐ **Cue**. It turns into ✔ **End cue 0:12**, counting; tap it to end the cue.

On the recording page itself: ⭐ **Mark** / ✔ **Finish**, or the keys **M** / **F** / **/**.

What to say

To start a cue

- **"Mark"**
- **"Mark it"**
- **"Mark that"**
- **"Mark the shot"**
- **"Cue it"**
- **"Cue that"**
- **"Start a clip"**
- **"Bookmark"**

To end it

- **"Finish"**
- **"Finish it"**
- **"Finish the cue"**
- **"End the cue"**
- **"Stop the clip"**
- **"Cut"**
- **"Cut it"**

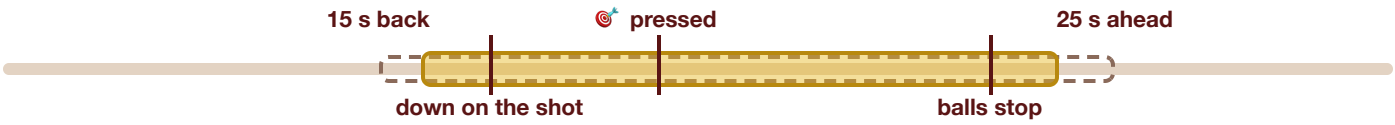

One sentence at a time. The big line at the bottom of the scoreboard shows what was heard; a message at the top says **Marked** or **Finished**. Nothing is said out loud — it would end up in the video.

With Siri

Say **"Hey Siri, Scoreboard"**, wait for Siri, then **"Mark"** (later: "Hey Siri, Scoreboard" … **"Finish"**). The Shortcut is set up once — see the *Voice commands & Siri* PDF. Siri answers out loud on the phone; the recording goes quiet for 3 seconds so that answer isn't in the video.

🎯 Auto cue — the camera finds the shot

A second way to mark: press 🎯 **Auto cue** (beside ⭐ Cue), press *****, or say **“Auto cue”** — before, during or just after a shot. You don't finish it: the camera watches the table and the clip cuts itself.

- **Which shot:** the one going on when you press; otherwise the last one up to **15 s** before the press; otherwise the next one starting within **25 s**.
- **The clip:** from **5 s before** the player gets down on the shot to **5 s after** the balls stop. Named like any cue.
- **No shot in that time: no clip** (the scoreboard says “No shot within 25 s”). Someone leaning over the table or walking past isn't a shot — the balls have to end up somewhere else.
- While it works, the button shows 🎯 **Finding the shot 0:04**, then 🎯 **Shot 0:06**, then **Keeping 5 s more**. **Press again to cancel.**
- **It needs the camera page watching the table** (📷 Set Up Camera, the table calibrated). The button is dimmed when it isn't; the recording page shows “Shots: the camera is watching the table”. On the recording page: 🎯 **Auto cue** or the **A** key; the 15 / 25 / 5 / 5 seconds can be changed in its Settings.

Say it

- **“Auto cue”**
- **“Auto clip”**
- **“Auto mark”**

What a cue is

Mark right after the good shot. You only know a shot was good once it's over, so the cue **starts 20 seconds before** you marked it — the beginning of the shot — and runs until you finish it.

- **Its name** is made from the scoreboard, as things stood **when the cue starts**:
  `Luigi-vs-Bob-8-Ball-game 5 of raceto 7-1m35s-2026-10-25-21h04m10s-cued`
  the player selected, who they play against, the game, where the race stands, the length, the date and time of its start.
- **Switched to the next player just before marking?** The shot still goes to the one selected 20 s earlier.
- **Who's “against”:** the other player; in teams, the other team (`Luigi-vs-Bob+Chris`); in a points game with more players, all the others. Nobody selected: the two sides (`Luc-vs-Bob`).
- **A new mark** while one is still open ends the open one first. A cue nobody finishes ends by itself after 15 minutes.
- The 20 seconds can be changed on the recording page (*A clip starts … seconds before the mark*).

The sound

- The only sound a cue makes is a **very faint tick**.

- The recording's own sound goes **silent for a moment** at each cue — 1 second for the key and button, 3 seconds by voice or Siri — so not even the tick is in the video.
- Your own voice saying “Mark” **is** recorded (it comes before the cue is made). Prefer the / key or the button when the room's sound matters.

Afterwards: watch, fix, export, delete

The cue list

On the recording page (even while it records) or the Cues page. Click a cue to play it straight from the recording. Drag its yellow start and end, nudge them ±1 s, or set them at the playhead (I / O); **Save**. ✎ **Name** renames it.

⬇ Export

Cuts the cue out as a video and downloads it; a copy stays in `Movies/Pool Master Counter/Clips`. Works while it's still recording.

Delete a cue

The 🗑 at the end of its row: the first click asks **Delete?**, the second deletes it. The recording itself stays.

Delete a recording

🗑 **Delete** beside a recording (first click asks): it goes to the Mac's **Trash** (can be put back), its cues with it. Exported clips are kept. Not while it's recording — stop it first.

If it doesn't work

“The recording page isn't open”	Open 🎬 Record from the scoreboard — same browser, same address (localhost:4173, not the GitHub page).
“The recording page isn't recording”	Press ● Record on the recording page.
No ⭐ Cue button	It only shows while recording, and only if both pages come from the same address. Reload the scoreboard after an update.
“Nothing is marked to finish”	There's no open cue — it was already finished (or a new mark ended it).
/ pauses the shot counter instead	The scoreboard doesn't see a recording running — check the two points above.
🎯 Auto cue dimmed, “needs the camera”	Open 📷 Set Up Camera on the scoreboard and calibrate the table; the camera page must stay open (it can be in the background).
“No shot within 25 s”	The camera saw no ball move in that time. Press closer to the shot, or use ⭐ Cue / / instead.
“Mark” not understood	Say it a little longer: “mark the shot”. Voice needs the internet in Chrome.

The sentences here are checked against the scoreboard's own sentence list (js/voice.js) when this PDF is made. Siri address: http://10.0.0.52:4173/voice.
